

A VISIBLE COMMITMENT TO SUSTAINABILITY

What was once considered waste can now
remain a beautiful part of our lives

THE GOOD PLASTIC COMPANY IS A EUROPEAN-BASED MANUFACTURER OF RECYCLED PLASTIC PANELS

The Good Plastic Company was founded in 2018 with a mission to contribute to solving the problem of the 400 million tonnes of plastic waste that are generated annually.

Now the company has grown to become an international manufacturer of recycled plastic panels that helps brands to make a visible commitment to sustainability.

The Good Plastic Company is focused on large-scale environmental impact by filling the gap between the recycling industry and business.

Recycling centres worldwide process thousands of tonnes of plastic each per month. However, uses for this material remain limited. The Good Plastic Company's recycled plastic panels enable new applications for this valuable resource.

On the other hand, businesses all around the world are implementing circular economy business models, driven by regulation and market demand. This sustainability transformation is a substantial challenge but also represents an opportunity for all companies in the value chain.

Businesses need a tangible way to demonstrate shared values to their customers and enhance brand affinity. Incorporating recycled materials into retail and commercial interior implementations is a highly effective method for brands to make a powerful impression.

POLYGOOD IS A SURFACE MATERIAL MADE FROM **100% RECYCLED** AND **100% RECYCLABLE** PLASTIC

The sustainable advantages of this material are equalled by its aesthetics. Each pattern has its own unique back-story. Polygood panels are produced from a wide range of post-consumer and post-industrial plastic waste sources, from refrigerators to single-use cutlery, electronics and industrial consumables.

We believe that, by generating demand for products made from recycled plastic, we can keep this valuable material from ending up in landfill, the oceans, or incinerators.

We demonstrate to companies that they can make beautiful and functional new goods from locally produced waste and make a visible commitment to the circular economy.

Our aspirational goal is to substitute virgin plastic and other non-sustainable materials everywhere possible, thus making recycled plastic a new norm in design and architecture

KEY FACTS ABOUT POLYGOOD

01.

TRULY SUSTAINABLE

100% recycled and 100% recyclable, with a take-back and remanufacturing programme

02.

UPCYCLING APPROACH

Made from a single type of plastic to ensure circularity

03.

LARGEST PANEL SIZE AVAILABLE ON THE MARKET

Our standard panel size is 1400x2800mm

04.

AVAILABLE IN INDUSTRIAL QUANTITIES

We can supply projects requiring hundreds of square metres of material

05.

SHORT LEAD TIMES

Large stock of standard patterns maintained, or made to order in 2-3 weeks

06.

SUPERIOR QUALITY

Made from hard plastics with high stiffness, Polygood panels are durable, waterproof, and hygienic

07.

EASY TO WORK WITH

Can be CNC routed, polished, sanded, thermoformed, drilled, glued etc.

08.

CUTTING SERVICE

Based on your requirements

OUR MANUFACTURING IS **THE HEART** OF OUR COMPANY

We have developed and are patenting machinery to process recycled plastic from different waste streams and turn it into beautiful surface materials. Our equipment allows us to collect a wide variety of data parameters during processing, including temperature and melting points, pressure, time, and melt flow index.

Our proprietary technology enables us to make recycled panels of the highest quality, which is supported by laboratory test results and certifications to international standards.

Our two current factories in the Netherlands and Ukraine are able to produce more than 1,000 tonnes of recycled plastic panels per year, meeting industrial-scale demand

SOURCING THE BEST RECYCLED PLASTIC RAW MATERIAL

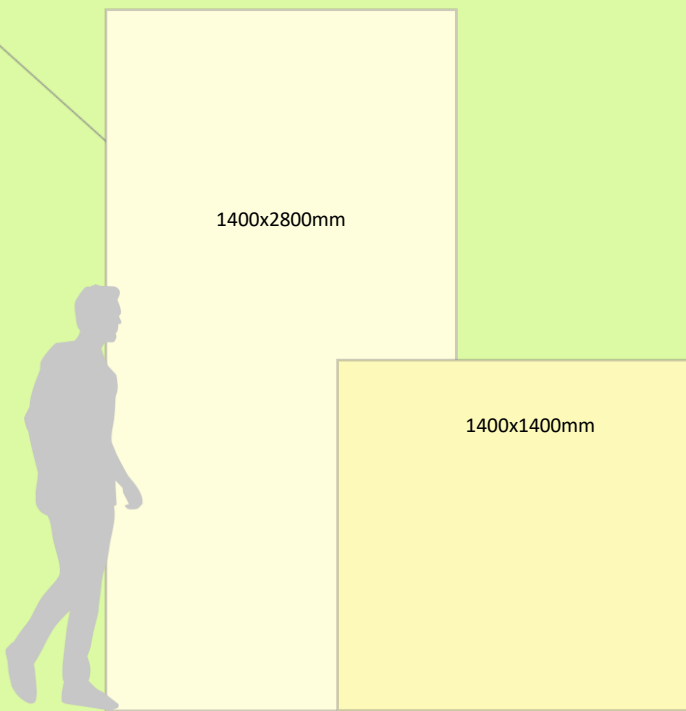

We partner with large recycling centres all over Europe that collect, sort and recycle plastics in order to ensure a high-quality and reliable supply of material. They work with both post-consumer and post-industrial plastics. We and our suppliers have procedures to ensure that we can guarantee the composition of our products to our clients. Working with large-scale recyclers allows us to keep stock consistent over time and in large volumes.

POLYGOOD IS MADE FROM A SINGLE TYPE OF PLASTIC TO MAKE IT A 100% RECYCLABLE MATERIAL

POLYGOOD PANELS – SPECIFICATIONS

Dimensions	1400x2800mm, 1400x1400mm
Thicknesses	12mm and 19mm
Thickness tolerance	±0.5mm
Finish	Semi-matte (other finishes available on request); single-faced

POLYGOOD STANDARD PATTERN RANGE

Our Standard range comprises naturalistic and modern patterns in a range of colour palettes that combine beauty and sustainability. The dominant colours in our range reflect current trends to ensure that your designs are as stylish as they are modern. Available in quantity for large interior and exterior design projects.

Origin: spools

#PS073: EMERALD GHOST
Origin: small domestic appliances

#PS2401 SEA FOAM DARK
Origin: spools

#PS014: DARK KNIGHT
Origin: household electronic goods

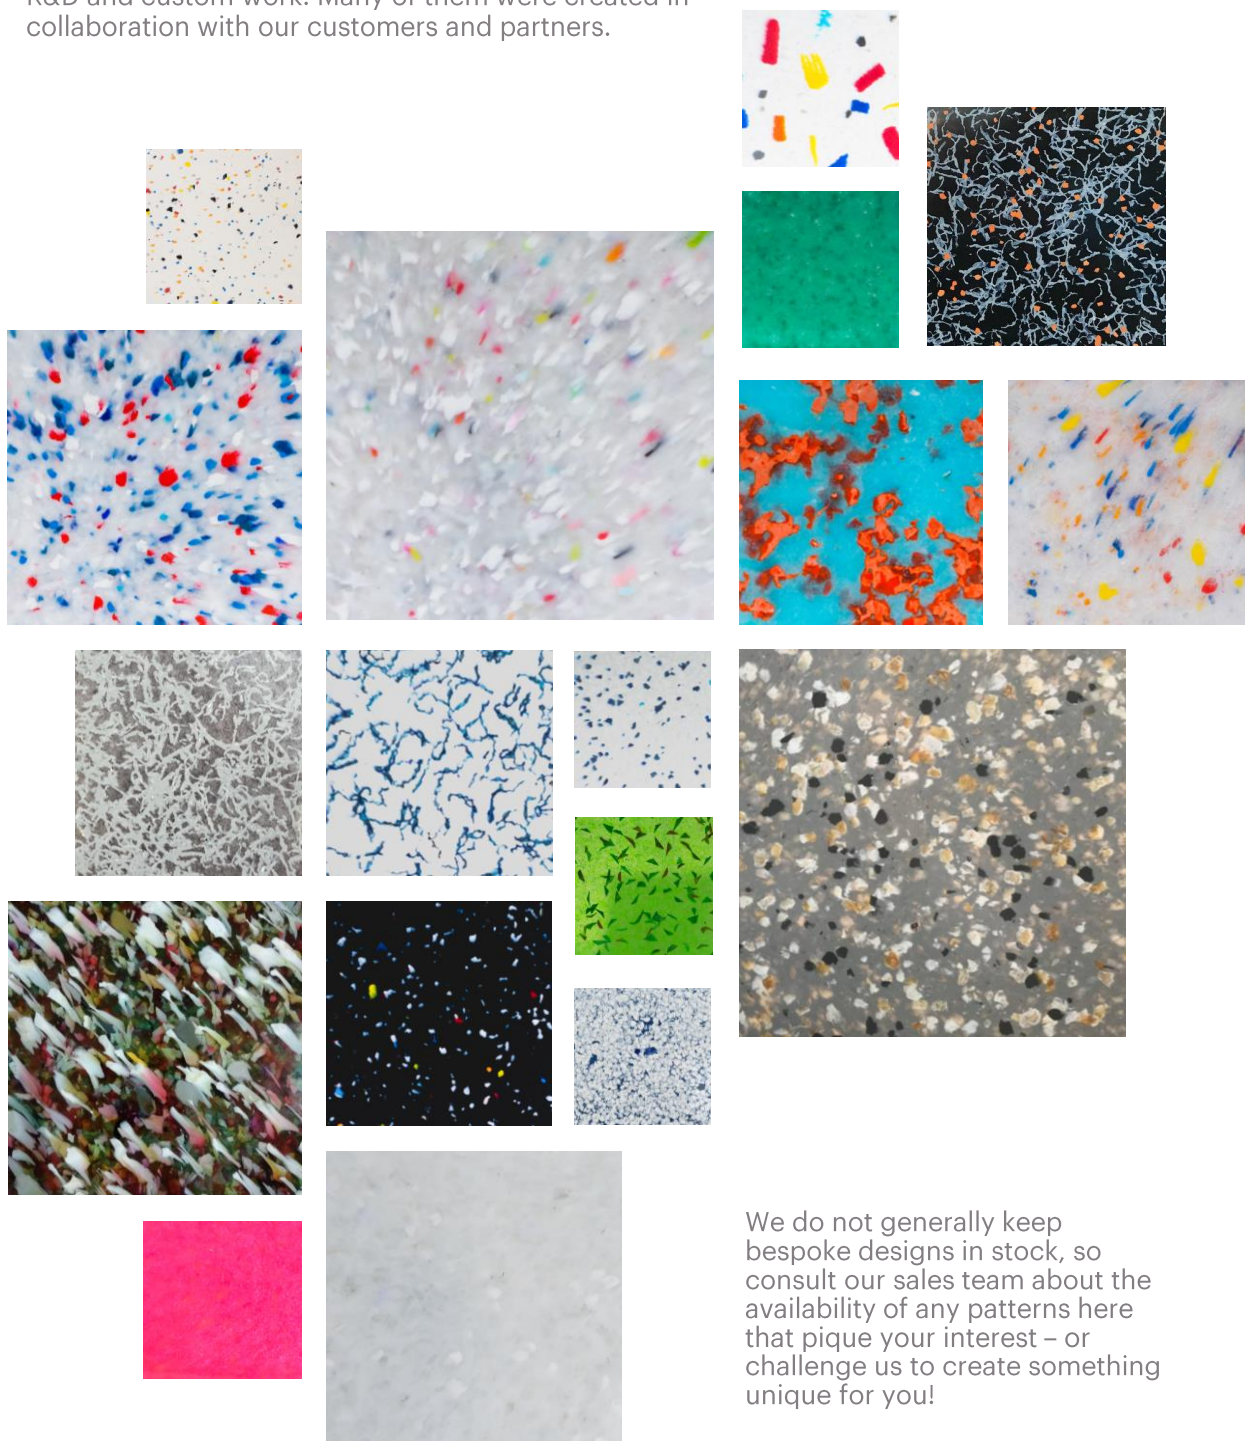

BESPOKE PATTERN CREATION

New interior design trends emerge all the time. To keep up with them, we work with our clients to create patterns that satisfy their needs without being limited to our standard range. Once created, we can maintain raw material in stock to ensure that bespoke designs remain implementable consistently into the future, and in large volumes.

Bespoke patterns created over the years have turned into a whole Polygood Bespoke Collection, available by demand.

These bespoke patterns illustrate the results of our R&D and custom work. Many of them were created in collaboration with our customers and partners.

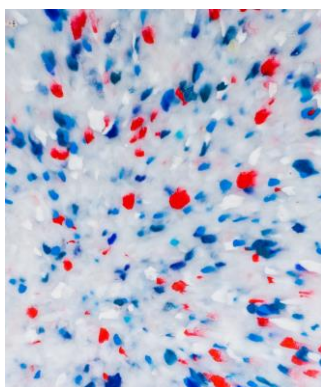

We do not generally keep bespoke designs in stock, so consult our sales team about the availability of any patterns here that pique your interest – or challenge us to create something unique for you!

BESPOKE TRANSLUCENT SELECTION

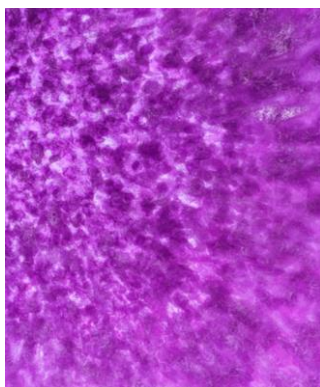

Are you looking for a sustainable solution for your lighting project? Do you want to cast coloured light to accent your interior design? Try our translucent materials! Mix patterns to create interesting effects or ask us to add specks of opaque material for a floating effect. Translucent patterns are available in limited quantities, so discuss your needs with your account manager before placing an order.

LIGHT SELECTION

Light-coloured patterns are a great fit for any kind of project. But they can be more adventurous than just different shades of white. Colourful accents add a touch of charm to pale backgrounds – and, of course, they are sustainable, being made from recycled appliances and single-use cutlery.

ACCENTS MADE FROM POLYGOOD PANELS REDUCE THE NEED FOR VIRGIN MATERIALS AND **CAST BRAND IDENTITY IN A SUSTAINABLE LIGHT**

Distinctive Polygood panels can be used to create modern-looking environmentally-conscious furniture and interior or exterior design elements.

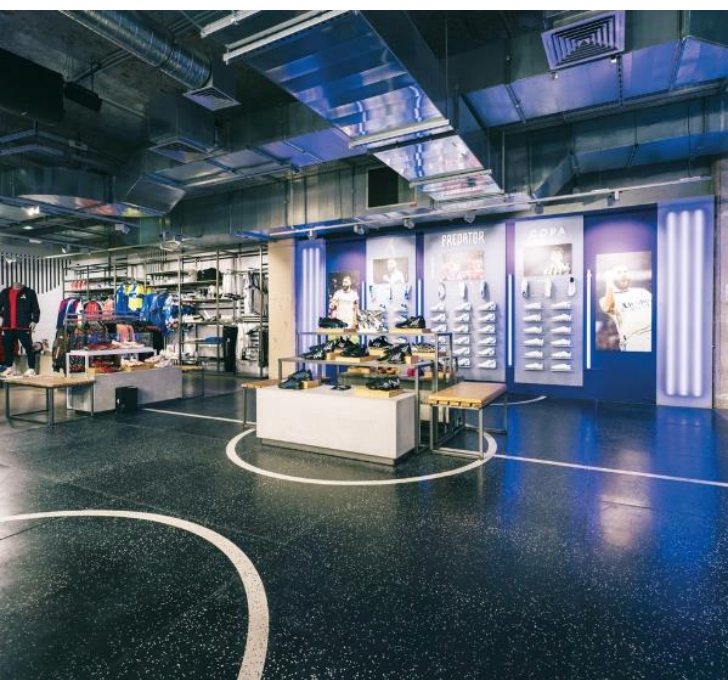

Wall panels and shelving, counter tops and displays, signage and storage: each corner shop, boutique hotel or modern office can give new life to the 5 to 10 tonnes of plastic waste.

RETAIL

Polygood eco-conscious materials can be a perfect match for the most stylish brands. Retail display fixtures such as shelves, stands, podiums and racks made from Polygood panels serve as visual proof of your brand's sustainability commitments in practice.

RESTAURANTS & CAFES

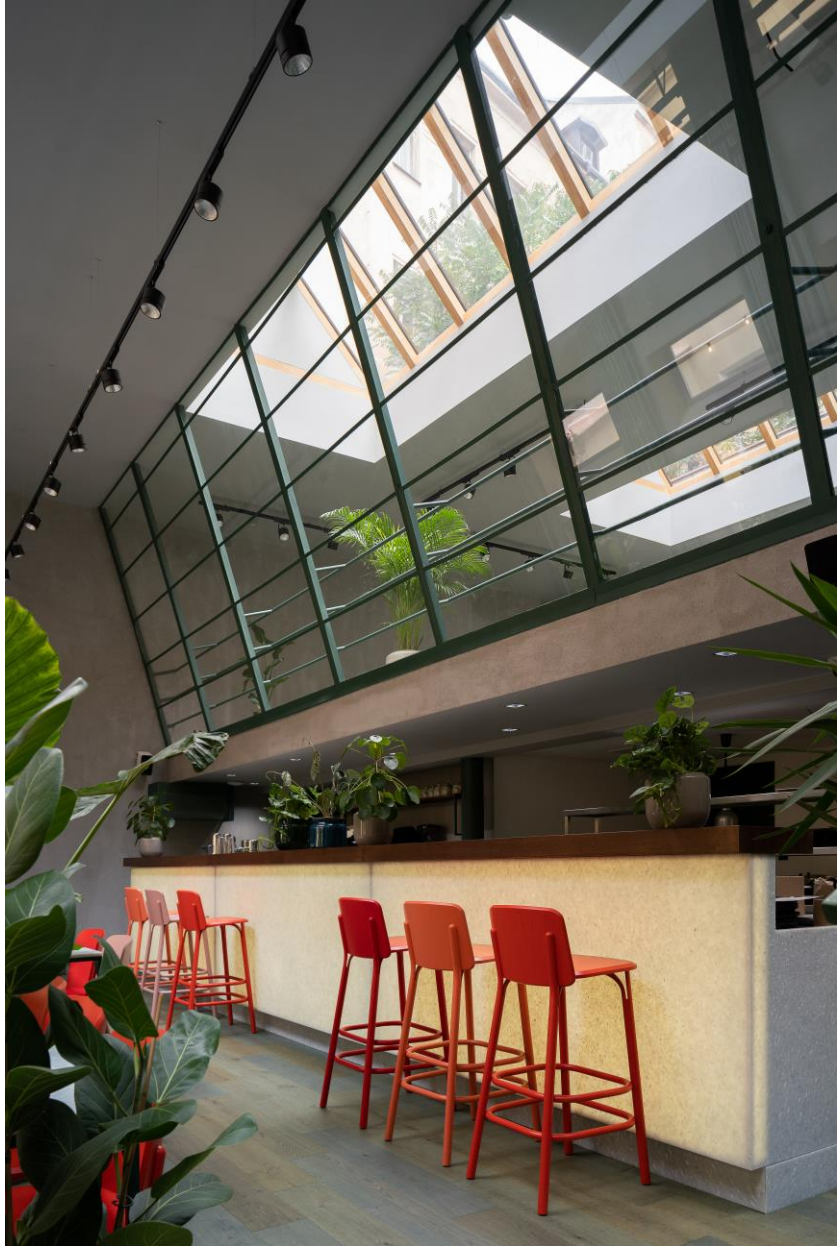

The introduction of eco-friendly practices in cafés and restaurants has a significant impact on customers' perceptions and purchasing decisions. By implementing your design with Polygood material, each café and restaurant can create a unique atmosphere and embody the concept of a green restaurant, helping to change the world for the better.

OFFICES & SPACES

When the Green Office concept becomes more than just another trend, it transforms outdated workspaces into eco-friendly environments that benefit both employees and the business. Contribute to the circular economy by choosing recycled plastic for your office interiors. Workspaces, dining and bathroom areas can all be made from Polygood panels.

HOSPITALITY

Today, modern hotels are changing the industry with sustainable hospitality practices. Polygood is the perfect solution for innovative interiors, impressing guests with its uniqueness and eco-friendly characteristics.

EVENTS & EXHIBITION BOOTHS

More and more events are being held according to sustainability principles. Using recycled materials to build exhibition stands or even the whole pavilion is a significant gesture towards sustainability. Surprise your audience with a stand made from Polygood.

BECOME PART OF OUR TAKE-BACK AND REMANUFACTURING PROGRAMME

Elements built from Polygood and cut-offs created during fabrication should not end up in landfill at the end of their useful lives. This valuable material can be recycled and reused multiple times. That's why we run a continuous Take-back and Remanufacturing Programme.

Sustainable assembly and construction.

Our contribution is to create a material that is 100% recycled and 100% recyclable. Your task is to create a sustainable piece of furniture. Because Polygood is a structural material, you don't need wooden supports or other elements to make it stable. This way, it can be easily disassembled and recycled. Remove the glue and protective film to keep the material clean for recycling.

Engage in real sustainability by closing the loop with Polygood panels.
